## CAN YOU COMPLETE OUR BUMBLBEE QUIZ?

Bumblebees do not produce **HONEY** for us to eat.

Bumblebees prefer **COOLER** temperatures and can overheat in **WARMER** temperatures.

Bumblebees have **UNIQUE** adaptations to live in cooler **CLIMATES**, such as the UK, including their **THICK, FUZZY** hair.,

Bumblebees do not live in hives, they will nest in an **UNDISTURBED, SHADED** area. Such as a shed, abandoned rodent hole, or a **COMPOST** heap!

### Word Bank

Shaded    Climates    Warmer    Unique    Fuzzy  
Cooler    Honey    Thick    Compost    Undisturbed

Can you name 5 foods that bees pollinate that we can eat as one of our 5-a-day?

Tomato, aubergine, peppers, chillies, blueberry, cranberry, raspberry, strawberry, currants, gooseberry, apples, plums, pears, orange, tangerine, lime, grapefruit, melons, courgette, pumpkin, cucumber, squash, peas, beans, cabbage, turnip, kale, cauliflower, broccoli, sprouts, beetroot.
