CAN YOU COMPLETE OUR BUMBLEBEE QUIZ?

1. Bumblebees do not produce HONEY for us to eat.
2. Bumblebees are large, FUZZY INSECTS.
3. One characteristic of an insect is that they have three body segments: HEAD, ABDOMEN, and THORAX.
4. Bumblebees are also a HEXAPODA, as they have SIX legs, which is another characteristic of an insect.
5. We normally think of bumblebees as BLACK and YELLOW, but they can be red and black, orange and black or all yellow!
6. The fuzzy hair that covers a bumblebee's body is called PILE, which helps keep them warm.
7. Bumblebees do not live in hives, they will NEST in an UNDISTURBED SHADED area. Such as a shed, abandoned rodent hole, or a COMPOST heap!
8. Bumblebees do not have EARS, they can feel VIBRATIONS of sound through wood and other material.
9. A FEMALE worker bee has a stinger, but they rarely sting unless provoked. A MALE bumblebee has no stinger.
